Reading1

Table of contents

What kind of reading is it? 1
Who is the intended audience? 1
How is the piece structured? 1
What are the key ideas, concepts, or theories discussed? 1
What is the overall contribution? 2
What issues or gaps remain? 2
How does this connect to the module/programme? 2

What kind of reading is it?

Is it an academic paper, technical report, blogpost, etc.? And what kind of contribution is trying to make? Conceptual, theoretical, empirical or something else?

Who is the intended audience?

Is it intended for academics, field experts, the general public? etc.? For example, if you think this is intended for someone who needs to learn new skills or someone who is in a policy-making position how do you know this?

How is the piece structured?

Briefly, how is it organised in terms of headings, sub-headings, sections, etc.? Can you explain this structure responds to the kind of reading and type of audience?

What are the key ideas, concepts, or theories discussed?

Briefly identify the specific areas that the contribution engages with. How do you know this?

What is the overall contribution?

What does it build on or what gap does it respond to? What are the key findings or conclusions?

What issues or gaps remain?

If relevant, are there assumptions that might not hold in other contexts? Can you think of other case studies or contexts where the reading would apply and explain why? If you think the contribution is generally valid can you explain why? Are there areas for future work identified?

How does this connect to the module/programme?

Reflecting on the answers given by the two students, what connects this reading to the rest of module? For example, why did we assign it and make you talk about it? Does it prompt reflection on anything else you've read? Are there connections to *other* modules you're taking? Why? What further questions does this reading raise for you?
